DETAILED ACTION

1. This action is responsive to the Applicant's Amendment filed on April 29, 2005.
2. Claims 1 – 15 are allowed.

Drawings

The drawings filed on 7/17/2001 are acceptable subject to correction of the informalities indicated on the drawings, i.e., change the hand made corrections of the translations from French to English. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

Prior art of record taken either singly and/or in combination, does not teach or disclose a method as recited in independent claims 1 and 14, or a system as recited in claim 8 with the following features:

Claim 1:

A method for loading applications into modules of an embedded system including a virtual machine comprised of a pseudocode interpreter; assigning an identifier to each module,

Art Unit: 2193

and a reference number to each class, each method, and each attribute encapsulated in classes of a module; coding the reference to a method or an attribute in the linked pseudocode of a module in three bytes constituted by an indicator indicating the reference to a class internal or external to the module, the number of the class, and either the number of the method or the number of the attribute.

Claim 8:

An embedded system including a virtual machine and an API platform; three bytes corresponding to a reference to a class internal or external to the module, a reference external to the module constituting the index of the API module in the module array, a class number corresponding to the index of the class in the table representing the classes of the module, and a method or attribute number corresponding to the index or the method or the attribute in the array representing the methods or attributes of the class of the module.

Claim 14:

A method for executing an application of a multi-application embedded system to include a reference to a method or an attribute in pseudocode, coded in at least three bytes corresponding to a reference to a class internal or external to the module, a class number, and a method or attribute number.

The closest prior art is Wilkenson, U.S. Patent 6,308,317, which discloses identification of classes, methods, and attributes via the constant pool, but does not disclose coding a reference to a method or an attribute in the linked pseudocode of a module in three bytes constituted by an indicator indicating the reference to a class internal or external to the module, the number of the

Art Unit: 2193

class, and either the number of the method or the number of the attribute, nor does it disclose a reference external to the module constituting the index of the API module in the module array, a class number corresponding to the index of the class in the table representing the classes of the module.

Thus all remaining dependent claims 2 – 7, 9 – 13, and 15 are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
